

Change Operation 3: Move

*

Please open the Declare process model called "declare_move.json" that you received via email and make sure you understand it. Please implement the following change operation by manually modifying the Declare process model.

Can you successfully implement the change operation without violating non-violable relationships?

Change Operation: Move activity d before a. This means, activity d has to occur before activity a now. However, activity a can still occur without activity d being executed. The relationship from d to b should not be changed.

Non-violable relationships:

- (a) Activities e and f always occur together or not at all. If they occur there is no given ordering.
- (b) Activities b and d are exclusive, i.e., exactly one of those activities occurs.
- (c) If activities a and b occur, it is true that b directly follows a.

 Yes	 No
--	---

If no, which non-violable relationships are violated?

Select all that apply

- ☐ (a) Activities e and f always occur together or not at all. If they occur there is no given ordering.
- ☐ (b) Activities b and d are exclusive, i.e., exactly one of those activities occurs.
- ☐ (c) If activities a and b occur, it is true that b directly follows a.

If yes, does your modification change any other activity relationship of the process? Please select all relationships that are modified, removed, or inserted. Briefly describe how these relationships changed in the comment field.

Comment only when you choose an answer.
